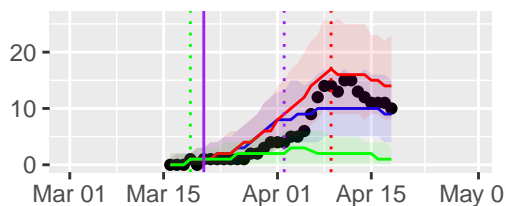

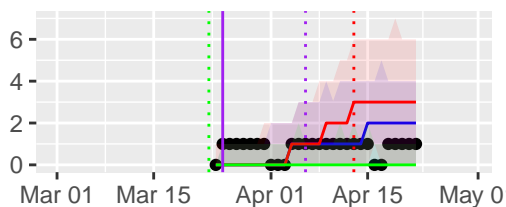

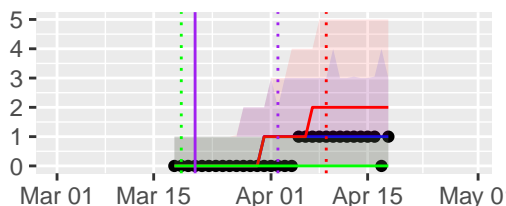

Figure 1 is a line plot showing the number of cases per day for COVID-19 in the Netherlands from March 1 to May 0. The y-axis represents the number of cases, ranging from 0 to 8. The x-axis represents time, with major ticks for Mar 01, Mar 15, Apr 01, Apr 15, and May 0. The plot includes observed data (black dots), a fitted model (red line), and a shaded area representing the confidence interval. Vertical dashed lines indicate the start of the first (green), second (purple), and third (red) waves. The first wave peaks around March 20, the second around April 10, and the third around April 15.

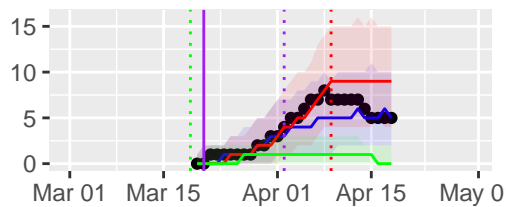

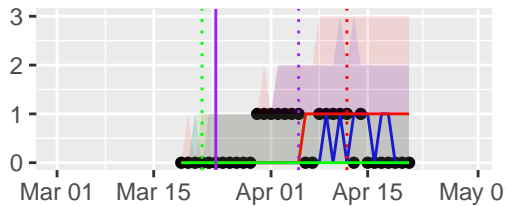

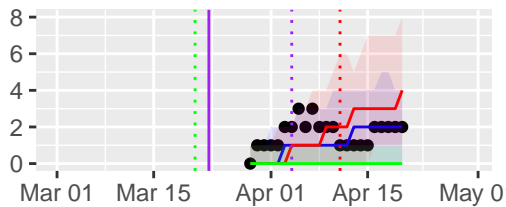

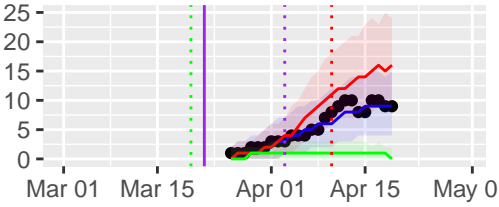

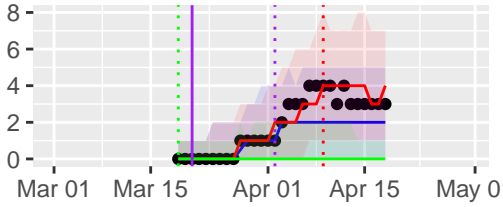

Figure 1 is a line graph showing the daily number of new cases in the United States from March 1 to May 1, 2020. The y-axis represents the number of cases (0 to 10). The x-axis shows dates. Three lines represent different models: a red line (top), a blue line (middle), and a green line (bottom). Shaded areas around the lines indicate uncertainty. Vertical dashed lines in purple, blue, and red mark specific dates.
