Figure 1 is a line plot showing the number of cases per day for COVID-19 in the Netherlands from March 1 to May 1, 2020. The x-axis represents time, with major ticks for March 01, March 15, April 01, April 15, and May 0. The y-axis represents the number of cases per day, ranging from 0 to 6. The plot includes observed data (black line), a model fit (red line), and a shaded area representing the uncertainty interval. Vertical dashed lines indicate the dates of the first, second, and third waves. The first wave peaks in late March, the second in early April, and the third in mid-April.
